The MAILING DATE of this communication appears on the cov r she t with the correspondence address Period f r Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status							
1)	Responsive to communication(s) filed on <u>04 November 2003</u> .						
2a) <u></u> ☐	This action is FINAL . 2b)⊠ This action is non-final.						
3)□	3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims							
4)🖂	☑ Claim(s) <u>1-20</u> is/are pending in the application.						
	4a) Of the above claim(s) is/are withdrawn from consideration.						
·	5) Claim(s) is/are allowed.						
	Claim(s) <u>1-20</u> is/are rejected.						
7)							
8) Claim(s) are subject to restriction and/or election requirement.							
Application Papers							
9)☐ The specification is objected to by the Examiner.							
10) ☐ The drawing(s) filed on is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.							
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).							
11)	Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.							
Priority under 35 U.S.C. §§ 119 and 120 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).							
 a) All b) Some * c) None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No. 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 13) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78. a) The translation of the foreign language provisional application has been received. 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see amendment, filed 11/4/03, with respect to the rejection(s) of claim(s) 1-20 under Dunsmuir et al (US 5,638,522) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Dunsmuir et al and Bogdan (US 5,903,265).

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3 and 7-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Dunsmuir et al* (US 5,638,522) and *Bogdan* (US 5,903,265).

Dunsmuir discloses a method of signaling that an event has occurred. An application program (col. 3, lines 14-25; col. 5, lines 17-24; col. 25, lines 5-20) requests a display attribute (col. 18, lines 11-40; col. 19, lines 36-42) for an event

Art Unit: 2173

object (col. 18, lines 41-44) to be displayed on a display screen, including an event type (col. 16, lines 59-65) corresponding to the event object (abstract). In response to the request, indexing a table with the event type and a screen capability flag to obtain the display attributes, wherein the table is located externally of the application program and has a plurality of display attribute lists having a display attribute corresponding to each event type (col. 3, lines 25-32; col. 12, lines 49-62; figs. 10-12, 18; col. 18, lines 15-22; col. 26, lines 38-40). The application program displays the event objects on the display screen with the display attributes, wherein a user of the computer system is signaled that an event has occurred (col. 2, lines 15-27; col. 5, lines 17-24; col. 19, lines 36-42; col. 22, lines 24-48; col. 23, lines 8-15). Dunsmuir teaches indexing a table with events and screen flags to obtain display attributes and Dunsmuir also teaches external events and a plurality of display attributes, but it does not teach that the table is located externally of the application program. However, Bogdan discloses an operating system that allows a user to customize window elements provided by the operating system. The window elements may be used by the operating system as well as application programs that are run on the operating system (abstract; col. 2, lines 23-37, 59-65). The invention enables the user to obtain resources outside the application to get the display attributes (col. 3, lines 3-9, 33-45; col. 4, lines 10-13, 32-34, 52-60; col. 5, lines 39-45; col. 6, lines 48-67; col. 7, lines 1-17).

Art Unit: 2173

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include Bogdan's teaching of getting attributes from an external table because the system provides a centralized sourcing of needed data.

Claims 2 and 16:

See claim 1. Dunsmuir teaches setting display attributes in a graphical user interface (table) such that the display attribute conveys a particular meaning to the user (col. 5, lines 17-24; col. 18, lines 12-67; col. 19, lines 1-22, 36-42; col. 22, lines 24-48; col. 23, lines 8-15; col. 25, lines 5-20).

Claims 3 and 17:

Dunsmuir teaches color as a display attribute (col. 19, lines 36-41; col. 23, lines 8-15).

Claim 7:

Dunsmuir teaches changing of display attributes (abstract; col. 19, lines 36-42).

Claim 8:

Dunsmuir teaches that the user is enabled to change display attributes (abstract; col. 20, lines 30-33; col. 22, lines 19-48; col. 25, lines 5-20).

Claim 9:

Dunsmuir teaches a table residing in the operating system of the computer

Art Unit: 2173

(col. 16, lines 53-65; fig. 10).

Claim 10:

See claims 1 and 9. Dunsmuir teaches in fig. 10 an event system 240 having a schedule manager 242 that includes a program grid 244 and a dispatcher 258. In response to events and conditions listed in the grid, the schedule manager carries out associated actions 266 that are also defined in the grid (col. 16, lines 53-65; fig. 10). The schedule manager grid displays (after accessing a screen capability flag) graphic icons representing events, conditions, actions, etc., (col. 18, lines 11-44).

Claims 11 and 13-15:

See claim 1. Dunsmuir teaches that although computer 32 is illustrated as a desktop unit, a relatively smaller notebook size computer (portable, palmtop, palmsize) can also be used (col. 9, lines 52-54).

Claims 12:

See claim 1. Dunsmuir teaches a processor coupled to a bus, a display screen, a memory unit coupled to the bus and having instructions that when executed by the processor implement a method of signaling that an event has occurred; and an application program requesting display attributes for an event object to be displayed (col. 3, lines 60-67; col. 4, lines 20-34; col. 9, lines 30-54; col. 31, lines 1-6; fig. 1).

Application/Control Number: 09/580,296 Page 6

Art Unit: 2173

Claims 18 and 19:

See claims 1 and 11. Dunsmuir teaches events external to the computer system that trigger a call by the application program to request the display attribute for the event object. An example of these external events is the events and conditions relating to stock prices, other parameters of the companies represented by the stock shares, and changes in stock indexes (col. 28, lines 30-59).

4. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunsmuir/Bogdan in view of Dev et al (US 6,374,293 B1).

Claims 4-6:

Dunsmuir teaches condition symbols that represent a different condition that must be satisfied and event symbols that represent events that might occur but fails to teach display attributes that convey a particular meaning such as warning, caution, and good status. However, Dev discloses a network management system having inference handlers that are triggered by predetermined virtual network events such as change in specified network data in a model (software object, multifunction icon), predefined events or changes in models or model relations. An alarm condition is generated when the network data meets predetermined criteria. The network management system provides location views; figs. 7A-7C illustrate a

Page 7

Art Unit: 2173

location view having a map 300 with network locations indicated by icons 302 (7A) including a name label indicating a network location; the color of the circle 306 indicates a status of that location. For example, green may indicate a normal status, whereas red may indicate a fault or trouble status (warning), (col. 2, lines 54-67; col. 6, lines 22-29; col. 12, lines 39-47). Dev teaches a multifunction icon 400 (fig. 9) that includes bar graphs 406 and 408 for indicating performance parameters, a background area 414 for representing the status of the network device by different colors, etc., (col. 14, lines 13-22). Therefore, it would have been obvious to one ordinarily skilled in the art at the time the invention was made to modify Dunsmuir/Bogdan's invention to include Dev's method of displaying status information using different colors for different meanings (situations, locations, conditions, actions, status, events, alarms, tasks, etc.) because the user is visually and dynamically informed of the state of a device (element, icon, etc.) so that he can act accordingly.

5. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dunsmuir/Bogdan in view of Blair et al (US 6,111,572).

Claim 20:

Dunsmuir/Bogdan does not teach that the event external to the computer system is the computer entering a certain geographic location. However, Blair

Art Unit: 2173

discloses a graphic calendar display method for use in displaying locale-sensitive information such as local holidays (col. 1, lines 1-4). The method displays a graphical representation of a calendar that adapts its display to the conventions of the locale in which it is being run (col. 2, lines 21-24; col. 6, lines 1-21). In a runtime operation, a representation of a first calendar is displayed with a first set of holiday objects; upon a given action, the method then automatically displays a representation of a second calendar with a second set of holiday objects. The first and second set of holiday objects may be displayed in different ways, such as different colors, so that the user may readily identify the differences between the two sets (col. 2, lines 42-61). Thus, it would have been obvious to one having ordinary skill in the art at the time of invention to modify Dunsmuir/Bogdan's invention to include Blair's local-sensitive method of displaying information according to the locale in which the computer is located because as Blair says, many organizations have computers connected in a large geographically-dispersed network environment that are managed in a distributed manner; managed nodes are often located across national boundaries and the multinational companies that operate such networks must deal with scheduling administrative events in these different locales; therefore, it may be necessary to distribute programs or display information that has to be presented in a culturally correct format.

Art Unit: 2173

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to X L Bautista whose telephone number is (703) 305-3921. The examiner can normally be reached on M-Th (8:00-18:00) Fridays Off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W Cabeca can be reached on (703) 308-3116. The fax phone number for the organization where this application or proceeding is assigned is (703) 746-7239.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
